

Implementation (and Demo): Team Assignment

3

 Published

 [Edit](#)

This is a team assignment.

Schedule a demo with your IA team mentor before the deadline for this assignment. Plan for about 20 minutes. The demo itself only needs to be about 10 minutes, but you should allow time for discussion with your mentor. Your entire team should attend if possible. (CVN teams should arrange online conferencing to present their demos.)

Do not submit this assignment until after your demo has taken place. Describe what you were able to demo and record any problems that arose, any recommendations from your mentor, etc. using github "issues" (or "wiki", etc.). Since you should have accumulated multiple issues by now, tell us which specific issues stem from the demo and how to find them. Also make sure your task board is up to date.

Deposit your entire codebase, including any test cases, configuration files, scripts, data sets, etc. in your github repository. Tag the repository to clarify which revisions of which files contributed to the demo. (You should keep everything in github all along, rather than developing offline and then depositing only when required for assignments, but its important to tag which revisions contributed to which assignments so that version of the project can be retrieved and rebuilt.) Make sure the repository itself has a useful README.

Each team should submit a single file, i.e., one member should submit. The name of your file should include your team name, and the contents of the file should also include your team name. Otherwise, all you need to include in this file is references to where to find your materials mentioned above.

Points 10

Submitting a file upload

File Types doc, docx, pdf, txt, xls, and xlsx
