

Architecture and Project Planning: Team Assignment 2

 Published [Edit](#)

This is a team assignment.

Develop the CRC cards for the user stories/use cases defined in your [Requirements and Wireframes assignment](https://courseworks2.columbia.edu/courses/10832/assignments/39196) (<https://courseworks2.columbia.edu/courses/10832/assignments/39196>).

Develop the corresponding class diagrams. First present each class individually, with attributes and operations. Then present relationships among classes, only need class names.

Record your CRC cards and class diagrams using github "issues" (or "wiki").

Update your task board to include references to the CRC cards and class diagrams relevant to each task (assign identifiers or use links).

Reconsider the iteration plan presented in your task board. Are some tasks too big or too small? Are there some CRC cards and/or class diagrams that do not belong to any task? Reorganize your tasks, adding, removing and reassigning. Keep in mind that you will need to demonstrate the first iteration to your IA team mentor as part of the [Implementation assignment](#) due October 27th - only one week!

It is ok to change previously defined user stories and use cases, but you must describe what you changed.

Each team should submit a single file, i.e., one member should submit. The name of your file should include your team name, and the contents of the file should also include your team name. Your file should include details about how the teaching staff can access your your CRC cards, class diagrams and task board.

Points	10
Submitting	a file upload
File Types	doc, docx, pdf, txt, xls, and xlsx

Due	For	Available from	Until
