Revised Project Proposal: Team Assignment C

Discuss your project with your team mentor in between submitting the original proposal and the revised proposal. (JP Morgan teams must also meet with their "customer".)

Revise the 1-2 page synopsis of your <u>Project Proposal</u>. What will your system do? Who will be its target users? Are there multiple categories of users, e.g., buyers and sellers, characters and dungeon masters, contestants and judges, participants and moderators? What will they use your system for? What *value* will it provide to its users? Include some typical workflows or usage scenarios. Also cover some likely error cases, e.g., the user is expected to do xxx but instead does yyy, how should the system respond? Raising exceptions, crashing, hanging, etc. should not be acceptable responses.

Add another page listing the technology you plan to use. This should include the programming language, development framework and persistent data store (make sure that you can download, install and run all of these, and they play nicely together). [Note: An earlier version of this assignment asked about your plans for additional tools, this has been removed.]

Finally, put some trivial content in both your trello team board and your github team repository and make sure all your team members as well as your team mentor can access both.

If anything significant has changed since your original project proposal, make sure to highlight the changes in the revised project proposal. (If everything has changed since the original proposal, just highlight a statement that says this at the beginning of the revised proposal, you do not have to highlight the entire file.)

Submit a single file describing your revised proposal. The name of this file should include the team name, e.g.,

FantasticFour_revised_proposal.doc, CodeBustersRevisedProposal.txt. Only one member of each team should submit. You should submit as soon as you're ready, and can resubmit repeatedly up to the deadline.
