Requirements and Wireframes: Team Assignment 1

✔ Published   ✏ **Edit**

This is a team assignment.

Define a very small set of high priority user stories corresponding to the first iteration of your project, a subset of the synopsis presented in your **Revised Project Proposal assignment**.

This subset should be sufficient for your project to be demoable, although probably not fully operational and usable. Your first demo will be due as part of the "implementation" assignment. That is, you should demonstrate your system to your team mentor prior to submitting the implementation assignment, which is due October 27. Note this gives you only two weeks! However, this is before the "unit testing" assignment, due November 3, so we do not expect your demo to be rigorously tested. (There will be additional demos corresponding to the "code review and system testing" assignment, due November 10, and of course the "final demo" due December 12.)

Expand your set of user stories into use cases, to cover the main steps of the basic flow and the major alternative flows, and sketch wireframes/storyboards for each user story/use case that involves interaction between the system and some human user role. Wireframes can be drawn by hand on paper/whiteboard and scanned/photographed, or you can use a drawing program (even powerpoint). A free "minimal" wireframing tool is available at **https://wireframe.cc/**   **(https://wireframe.cc/)** .

Set up a task board (trello or github project) that assigns user stories to pairs. Utilize the facilities available to record, organize and cross-reference all these materials.

Each team should submit a single file, i.e., one member should submit. The name of your file should include your team name, and the contents of the file should also include your team name. Your file should include details about how the teaching staff can access your task board.

Points	10
Submitting	a file upload
File Types	doc, docx, pdf, txt, xls, and xlsx

Due	For	Available from	Until
